OBJECTIVE

Computer Science student with strong foundations in Python, SQL, and data processing. Experienced in building ETL workflows, cleaning and transforming structured datasets, and designing automation-driven solutions. Seeking an entry-level Data Engineer role to develop scalable data pipelines and support data-driven decision-making in a high-performance environment.

EDUCATION

B-Tech - CSE | 2022 -2026
Gouthami Institute of Technology and Management for Women | CGPA - 7.8
Intermediate - MPC | 2020 -2022
JMJ Junior College| Percentage - 75.0
SSC -BSEAP | 2019-2020
ZPHS High School | GPA - 9

EXPERIENCE

Software Development Engineer Intern | SHNOOR International LLC | July 2026 - October 2026

- Contributed to full-stack HRMS development using React.js, Node.js, Express.js and PostgreSQL across employee, manager and admin workflows.
- Worked on internal email routing and notification functionality, including role-based recipient handling.
- Worked across HRMS modules including News, Documents, Attendance, Leave, Expenses and Tasks; collaborated through Git/GitHub branches, pull requests and code reviews.

Internship | Exploring The Power Of GenAI | NextHub Technologies | 05/2025 - 07/2025

Built and implemented Autoencoders and Variational Autoencoders (VAE) using Python and TensorFlow for dimensionality reduction. Designed data preprocessing pipelines to clean and transform high-dimensional datasets, working with the MNIST dataset for feature extraction. Visualized latent space using Matplotlib and optimized workflows to improve model efficiency, while applying structured data storage techniques for analysis.

Internship | Front-End Web Development | Raise Digital | 02/2024 - 06/2024

Developed a responsive portfolio website using HTML, CSS, and JavaScript, designing well-structured UI components to ensure seamless cross-device compatibility. Implemented organized content presentation to enhance navigation and user experience, while applying version control and basic deployment practices to manage and maintain the project efficiently.

PROJECTS

Certificate Management & Generation Platform (CMGP) | PERN Stack

- Built a full-stack certificate platform for dynamic PDF certificate generation, bulk issuance and public verification, owning the backend (Node.js/Express) and the entire User Panel frontend (React).
- Developed JWT authentication, mandatory first-login password change with route guards, Two-Factor Authentication, Forgot Password via OTP (Brevo email API), and role-based access control.
- Integrated Cloudinary for template backgrounds, signatures and profile pictures; implemented PDF downloads that preserve the exact template styling.
- Used k6 load testing to guide backend performance improvements with parallel database queries, indexes and connection-pool tuning.
- Implemented server-side pagination and ILIKE-based search across Users, Templates, Programs, Signatories and My Certificates; used Lighthouse audits to identify frontend performance issues.
- Migrated to a shared Neon PostgreSQL database, deployed on Render, and collaborated using Git/GitHub pull requests, merge-conflict resolution and code reviews.

Tech Stack: PostgreSQL, Express.js, React.js, Node.js, Cloudinary, Neon, Render, Brevo, k6, Lighthouse, Git/GitHub

Unsupervised Anomaly Detection in Financial Transactions

- Developed a full-stack application to detect suspicious financial transactions using Unsupervised Machine Learning (Isolation Forest).
- Implemented User and Admin dashboards with transaction monitoring, anomaly scores, and risk classification.
- Built REST APIs, JWT authentication, and PostgreSQL database integration for secure transaction management.

Tech Stack: React.js, Node.js, Express.js, PostgreSQL, Material UI, Isolation Forest

Digital Solutions For Good Governance And Justice | HTML, CSS, Python

Built a web-based governance platform to streamline digital service delivery and improve transparency. Designed and developed the backend using Flask with MongoDB integration to enable efficient data storage, retrieval, and workflow management. Implemented structured data handling and automation tools to enhance administrative efficiency and ensure reliable system performance.

Tech Stack: HTML, CSS, Python, Flask, MongoDB

SKILL SET

Languages - Python, SQL, JavaScript, PowerBI, Pivot Table, Microsoft Word, Excel, Vlookup
Skills - Teamwork, Problem-Solving, Time Management
Data & Analytics - Data Storage (Excel, CSV, Basic SQL), ETL Concepts, Data Analysis & Reporting, Data Visualization (Excel Charts, Matplotlib), Workflow Automation
Tools & Technologies - Pandas, NumPy, Power BI, Advanced Excel, Flask, MongoDB, Git (Basic), React.js, Node.js, Express.js, PostgreSQL, REST APIs, JWT, Cloudinary, k6, Lighthouse, Git/GitHub, Render, Neon

CERTIFICATIONS

DIGITAL SOLUTIONS FOR GOOD GOVERNANCE – BRAIN O VISION
Developed a Digital Solutions platform using HTML, CSS, JavaScript, Flask, and MongoDB, aimed at improving governance and justice through technology-driven services. The project integrates tools for public service delivery, legal assistance, automation, and efficient administrative workflows to enhance transparency and accessibility.
